Agro-advisory for Arid Gujarat, March, 2013

Arid Gujarat

- ✚ Farmers are advised to apply last irrigation to wheat the crop at dough stage.
- ✚ Farmers are advised to harvest mustard, gram, cumin at physiological maturity stage.
- ✚ As Mango is at full blooming stage, so farmers are advised to timely irrigate the fruit plants to avoid soil moisture stress which is the probable cause of flower dropping.
- ✚ Spathe emergence is started in Date palm. So, farmers are advised to apply irrigation at regular interval.
- ✚ Irrigation in Groundnut are advised at regular interval upto emergence, stop the irrigation till first flowers appears after then regular irrigation may be given.
